

SUMMARY OF POSTER ABSTRACTS
(listed by Session day and Presenter's last name)

Sunday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Andreas	Michael	University of Wisconsin-Madison		41	Thick/Thin Filament Structure	A Composite Approach to Model the Myosin Rod and Thick Filament	71
Brizendine	Richard	University of Nevada-Reno		6	Models of Contraction/Regulation	Observing the Behavior of a Single Myosin Head within a Myosin Filament Moving on Actin	36
Brundage	Elizabeth	Ohio State University	X	13	Thick/Thin Filament Regulation in Striated Muscle	Cardiac Troponin I Serine and Tyrosine Phosphorylation Exhibit both Functional and Signaling Integration	43
Chase	P. Bryant	Florida State University		14	Thick/Thin Filament Regulation in Striated Muscle	Increased Myofilament Lattice Spacing and Rate of Force Development (k_{TR}) during Ca^{2+} -Activated Cardiac Muscle Contraction	44
Chu	Sami	University of Minnesota-Twin Cities		15	Thick/Thin Filament Regulation in Striated Muscle	Effect of RLC Structure on the Myosin Super-relaxed State in Cardiac Thick Filament	45
Colpan	Mert	University of Arizona		16	Thick/Thin Filament Regulation in Striated Muscle	Regulation of Actin Dynamics at Thin Filament Pointed Ends in the Heart	46
Colson	Brett	University of Arizona	X	17	Thick/Thin Filament Regulation in Striated Muscle	An N-terminal Extension in Mouse Cardiac Myosin-Binding Protein C Modulates Myofilament Binding	47
Daneshvar	Nadia	Florida State University		42	Thick/Thin Filament Structure	Cryo-EM Structure of Thick Filaments from Drosophila Asynchronous Flight Muscle	72
Davis	Jonathan	Ohio State University		18	Thick/Thin Filament Regulation in Striated Muscle	In Search of Small Molecule Activators of Cardiac Troponin	48
Dvornikov	Alexey	Mayo Clinic		19	Thick/Thin Filament Regulation in Striated Muscle	New phenotyping tools revealed hypertrophic and dilated cardiomyopathy-like cardiac phenotypes in lamp2 and bag3 knockout zebrafish mutants	49
Feng	Hanzhong	Wayne State University		1	Length Dependent Force Development	To study ex vivo mouse working heart at human-like heart rate and the effect of N-terminal truncated cardiac troponin I on extending Frank-Starling response	31

Sunday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Geeves	Michael	University of Kent		7	Models of Contraction/ Regulation	Adaptation of mammalian myosin II sequences to body mass	37
Geist	Janelle	University of Maryland-Baltimore		20	Thick/Thin Filament Regulation in Striated Muscle	Myosin Binding Protein-C Slow (sMyBP-C) Function, Regulation, and Disease Implications	50
Giles	Jasmine	University of Wisconsin-Madison		21	Thick/Thin Filament Regulation in Striated Muscle	Phosphorylation of cMyBP-C modulates the activation-dependence of unloaded shortening velocity at low levels of Ca ²⁺ activation	51
Gong	Henry	Illinois Institute of Technology		43	Thick/ Thin Filament Structure	Helical Ordering of Myosin Heads in Skeletal Muscle with Myosin Inhibitor Treatment	73
Granzier	Henk	University of Arizona		22	Thick/Thin Filament Regulation in Striated Muscle	The giant protein titin regulates the length of the striated muscle thick filament	52
Hanft	Laurin	University of Missouri		2	Length Dependent Force Development	Role of Cardiac Myosin Binding Protein-C in Regulating the Frank-Starling Relationship	32
Heeley	David	Memorial University of Newfoundland		23	Thick/Thin Filament Regulation in Striated Muscle	Alpha (TPM1.1) and Beta (TPM2.2) Tropomyosins Have Different Biochemical Properties	53
Henze	Marcus	MyoKardia		3	Length Dependent Force Development	Ex vivo/ in vivo Demonstration of the Frank-Starling Mechanism; Evaluation of the Relative Contribution of the Thick and Thin Filaments to Length Dependent Activation	33
Holohan	So-Jin	King's College London		24	Thick/Thin Filament Regulation in Striated Muscle	Effects of temperature, sarcomere length and RLC phosphorylation on the conformation of the myosin motors in relaxed cardiac trabeculae	54
Irving	Thomas	Illinois Institute of Technology		44	Thick/Thin Filament Structure	Lattice Arrangement of Myosin Filaments Correlates with Fiber Type in Mammalian Skeletal Muscle	74
Kekenes-Huskey	Peter	University of Kentucky	X	8	Models of Contraction/ Regulation	Control of S100A1 Calcium-Mediated Gating at the C85 Post-translational Modification Site	38

Sunday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Kiani	Farooq	Boston University		45	Thick/Thin Filament Structure	Molecular Dynamics Simulations Show Movement of Tropomyosin on Filamentous Actin	75
Kiss	Balazs	University of Arizona		46	Thick/Thin Filament Structure	Nebulin Stiffens the Thin Filament and Augments Crossbridge Interaction - An X-Ray Diffraction Study on Intact Muscle	76
Kumar	Mohit	University of Cincinnati		25	Thick/Thin Filament Regulation in Striated Muscle	Restoring thick and thin filament interaction with C0-C2 region of MYBPC3	55
Lehman	William	Boston University		47	Thick/Thin Filament Structure	A New Twist on Tropomyosin Binding to Actin Filaments: Implications for Thin Filament Assembly and Regulatory Function	77
Li	Frank	University of Arizona	X	26	Thick/Thin Filament Regulation in Striated Muscle	Nebulin's C-Terminus is Necessary for Proper Sarcomeric Structure and Function	56
Lindert	Steffen	Ohio State University	X	48	Thick/Thin Filament Structure	Successful Identification of Cardiac Troponin Calcium Sensitizers Using a Combination of Virtual Screening and ROC Analysis of Known Troponin C Binders	78
Lombardi	Vicenzo	University of Florence		27	Thick/Thin Filament Regulation in Striated Muscle	Thick filament mechanosensing in skeletal and cardiac muscles: a common mechanism for different tasks	57
Maeda	Yuichiro	Nagoya University		49	Thick/Thin Filament Structure	The structure of F-form actin at atomic resolutions: mutual switching between polymorphic transition and ATPase	79
Mkrtschjan	Michael	University of Illinois-Chicago		28	Thick/Thin Filament Regulation in Striated Muscle	PKC epsilon signaling effect on actin assembly is diminished in cardiomyocytes when challenged to additional work in a stiff microenvironment	58
Mijailovich	Srboljub	Illinois Institute of Technology		9	Models of Contraction/Regulation	Influence of cTn Ca ²⁺ binding properties and cooperative mechanisms on cardiac muscle contractile dynamics	39
Murray	Jason	University of Washington-Seattle		10	Models of Contraction/Regulation	Overexpression of Rrm2B Elevates Cytosolic dATP and Cardiac Function	40

Sunday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Nelson	Shane	University of Vermont		29	Thick/Thin Filament Regulation in Striated Muscle	Myosin-Binding Protein C Isoforms Differentially Regulate Skeletal Muscle Function	59
Palmer	Bradley	University of Vermont-Burlington		11	Models of Contraction/Regulation	Strain-dependent Detachment of Cardiac Myosin Crossbridges can Explain the Force Response to a Quick Stretch	41
Reconditi	Massimo	University of Florence		30	Thick/Thin Filament Regulation in Striated Muscle	Effect of Temperature on Thick Filament Based Regulation of Mammalian Skeletal Muscle	60
Robinett	Joel	University of Missouri		31	Thick/Thin Filament Regulation in Striated Muscle	Regulation of Myofilament Force and Loaded Shortening by Myosin Binding Protein-C	61
Rynkiewicz	Michael	Boston University		32	Thick/Thin Filament Regulation in Striated Muscle	Actin Modeling is Critical in Determination of Tropomyosin-Actin Energy Landscapes	62
Savich	Yahor	University of Minnesota-Twin Cities		50	Thick/Thin Filament Structure	Myosin Orientation in a Muscle Fiber Using Bifunctional Spin Labels with High Angular Resolution	80
Schmidt	William	Johns Hopkins University		33	Thick/Thin Filament Regulation in Striated Muscle	Fropofol Decreases Force Development in Cardiac Muscle	63
Silva	A. Madhushika	Memorial University of Newfoundland		34	Thick/Thin Filament Regulation in Striated Muscle	The effect of threonine-77 on the cold adaptation of Atlantic salmon tropomyosin (Tpm1.1)	64
Singh	Rohit	University of Cincinnati		35	Thick/Thin Filament Regulation in Striated Muscle	Stability of Myosin Subfragment-2 Modulates the Force Produced by Acto-Myosin Interaction of Striated Muscle	65
Sitbon	Yoel	University of Miami		36	Thick/Thin Filament Regulation in Striated Muscle	Understanding the Role of the N-terminus of Myosin Essential Light Chain in Regulating Cardiac Muscle Contraction	66
Solis	Christopher	University of Illinois-Chicago		37	Thick/Thin Filament Regulation in Striated Muscle	Substrate Stiffness affects Myocyte Organization and Hypertrophy via PIP2 signaling pathways	67
Song	Taejeong	University of Cincinnati		38	Thick/Thin Filament Regulation in Striated Muscle	Loss of maximum force and speed of contraction in MYBPC2 knockout mice	68

Sunday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Swank	Douglas	Rensselaer Polytechnic Institute		4	Length Dependent Force Development	A Specialized Tnc Isoform Enables Muscle Stretch Activation by Reducing Calcium's Ability to Activate the Thin Filament	34
Tanner	Bert	Washington State University	X	5	Length Dependent Force Development	Effects of Myosin Light Chain Phosphorylation on Sarcomere Length-Dependent B-Myosin Heavy Chain Kinetics in Myocardial Strips from Propylthiouracil-Treated Rats	35
Taylor	Kenneth	Florida State University		12	Models of Contraction/Regulation	Structure of F-Actin decorated with the nucleotide-free smooth muscle myosin II motor domain	42
Tolkatchev	Dmitri	Washington State University		39	Thick/Thin Filament Regulation in Striated Muscle	Piperine, an alkaloid inhibiting the super-relaxed state of fast twitch skeletal fibers, specifically binds to and destabilizes the regulatory light chain of myosin	69
Tomasic	Ivan	MyoKardia		40	Thick/Thin Filament Regulation in Striated Muscle	Role of human cardiac RLC in modulating the super-relaxed state of myosin: A cardiomyopathy perspective	70
Tonino	Paola	University of Arizona		51	Thick/Thin Filament Structure	Matching titin's 11 C-Zone Super-Repeats with 9 Myosin Binding Protein-C stripes in the Cardiac Muscle Sarcomere	81
White	Howard	Eastern Virginia Medical School		52	Thick/Thin Filament Structure	Molecular Mechanism of the Activation of the Cardiac Thin filament by the Two N-Terminal Domains of Cardiac Myosin Binding Protein C	82
Yuan	Chen-Ching	University of Miami		53	Thick/Thin Filament Structure	Structure and Simulation Studies on Cardiac Muscle Contraction by Using dATP	83

Monday Poster Session

Last Name	First Name	Institution	ECl Speaker	Poster No.	Abstract Category	Title	Page No.
Ai	Lizhuo	Loyola University Chicago		5	Cardiomyopathies	Adolescent binge alcohol consumption effects on cardiovascular function	88
Baldi	Chris	University of Otago		42	Myofilament Contribution to Human Diseases	Reduced Calcium Sensitivity of Human Diabetic Cardiomyocytes: The role of cTnI Phosphorylation	125
Baldo	Anthony	University of Arizona	X	6	Cardiomyopathies	The Computational and Experimental Studies of Divergent Clinical Effects in Proximate Thin Filament Mutations	89
Barefield	David	Northwestern University		43	Myofilament Contribution to Human Diseases	MYBPHL is a Novel Myofilament Component Implicated in Arrhythmia and Dilated Cardiomyopathy	126
Cai	Hanfang	University of Wyoming		37	Regulation & Regulatory Signaling Networks	Concerted Splicing Regulation of RBM20 with Splicing Factors in Titin Z-, I- and M-band	120
Cammarato	Anthony	Johns Hopkins School of Medicine		7	Cardiomyopathies	The ACTC M305L Hypertrophic Cardiomyopathy Mutation Causes Hypercontractility and Impaired Relaxation of <i>Drosophila</i> Muscles	90
Campbell	Stuart	Yale University		44	Myofilament Contribution to Human Diseases	A Precision Medicine Approach to Molecular Diagnosis and Treatment of Arrhythmogenic Cardiomyopathy	127
Chung	Charles	Wayne State University		33	Elastic Proteins of Muscle	Exercise training increases compliant cardiac Titin content in rat and Sallimusisoform content in <i>Drosophila melanogaster</i>	116
Clark	J. Alex	Yale University		1	Determinants of Relaxation	Microscale Heterogeneous Relaxation in Ventricular Rat Epicardium	84
Clippinger	Sarah	Washington University in St. Louis		8	Cardiomyopathies	Dissecting the Molecular Mechanism of Familial Cardiomyopathies	91
Creso	Jenette	Yale University		9	Cardiomyopathies	Evaluating TPM1 Variant Pathogenicity Using Lentiviral Transduction of Engineered Heart Tissue	92
Deranek	Andrea	University of Arizona		10	Cardiomyopathies	Structural Investigation of Tropomyosin D230N and S215L Mutation Specific Correlates to Disease	93

Monday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Ehler	Elisabeth	King's College London		11	Cardiomyopathies	M-Band Composition in Dilated Cardiomyopathy	94
Farrell	Emily	University of Wisconsin-Madison		12	Cardiomyopathies	Early Pre-Hypertrophic Dysregulation of XIRP2 in MYBPC3-Null Mice	95
Fenwick	Axel	Washington State University		45	Myofilament Contribution to Human Diseases	Demembranated Skeletal and Cardiac Fibers Produce Less Force and Altered Cross-Bridge Kinetics in a Mouse Model for Limb-Girdle Muscular Dystrophy 2i	128
Foster	D. Brian	Johns Hopkins School of Medicine	X	38	Regulation & Regulatory Signaling Networks	Mitochondrial ROS-Sensitive Proteome & Phosphoproteome Remodeling in Heart Failure	121
Gregorich	Zachery	University of Wisconsin-Madison	X	54	N/A	Deletion of the Enigma Homolog Protein from the Z-Disc Depresses Cross-Bridge Cycling Kinetics in Mouse Myocardium	137
Grogan	Alyssa	University of Maryland-Baltimore		13	Cardiomyopathies	Loss of binding between giant obscurin and titin results in cardiac maladaptation	96
Guo	Wei	University of Wyoming	X	55	N/A	Giant Elastic Protein Titin and Its Splicing Regulator RNA Binding Motif 20 in The Onset and Development of Heart Failure	138
Holeman	Teryn	University of Arizona		14	Cardiomyopathies	The Role of α -Tropomyosin Mutations on Overlap Interactions and Binding Kinetics	97
Hwang	Peter	University of Alberta	X	15	Cardiomyopathies	Domain orientations of troponin C control calcium sensitivity in the cardiac troponin complex	98
Johnson	Chloe	University of Kent		16	Cardiomyopathies	Kinetic characterization of pediatric Hypertrophic Cardiomyopathy-causing β -Cardiac Myosin mutations	99
Kawai	Masataka	University of Iowa		34	Elastic Proteins of Muscle	Nebulin (Nb) increases thin filament stiffness and force/cross-bridge (CB) in slow-twitch soleus muscle fibers from conditional Nb knockout (cKO) mice	117
Klass	Matthew	University of Arizona		18	Cardiomyopathies	Stopped-Flow Calcium Kinetics of Hypertrophic Cardiomyopathy Associated Troponin T Mutations	101

Monday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Knight	Walter	University of Colorado-Anschutz Medical Campus		46	Myofilament Contribution to Human Diseases	Functional Improvements in Maturity of Human Induced Pluripotent Stem Cell Derived Cardiomyocytes Detectable in Isolated Myofibrils	129
Lin	Ying Hsi	University of Colorado-Denver		2	Determinants of Relaxation	Sarcomeric HDAC2 Functions to Suppress Myofibril Relaxation of Adult Ventricular Cardiomyocytes	85
Lindqvist	Johan	University of Arizona		47	Myofilament Contribution to Human Diseases	Typical nemaline myopathy modelled in the mouse	130
Liu	Chao	Stanford University		19	Cardiomyopathies	Controlling load-dependent contractility of the heart muscle at the single molecule level	102
Lynn	Melissa	University of Arizona	X	20	Cardiomyopathies	Modifier Effect of cTnT Isoform Switching in the Development of Tm-Linked DCM	103
Ma	Weikang	Illinois Institute of Technology		3	Determinants of Relaxation	Time-Resolved X-ray Diffraction Studies on Mouse Skeletal Muscle Relaxation	86
Madan	Aditi	Johns Hopkins University	X	21	Cardiomyopathies	TNNT2 Restrictive and Hypertrophic Cardiomyopathy Mutations Depress the Inhibitory Properties of the Troponin T1 Fragment, in vitro, and Stimulate Myocardial Dysfunction, in vivo	104
Marston	Steven	Imperial College London		22	Cardiomyopathies	Investigation of Small Molecules that Reverse the Uncoupling Caused by HCM and DCM Mutations in Contractile Proteins	105
McNamara	James	University of Cincinnati		39	Regulation & Regulatory Signaling Networks	MYBPC1 is Necessary for Post-Partum Survival and Skeletal Muscle Function	122
Methawasin	Methajit	University of Arizona		35	Elastic Proteins of Muscle	A Cellular Work Loop Study of Single Intact Cardiomyocytes of Two Mouse Models with Disparate Titin's Size	118
Mitchell	Stanford	University of Wisconsin-Madison		48	Myofilament Contribution to Human Diseases	Deciphering the Human Sarcomeric Proteome by Top-down Proteomics	131
Morck	Makenna	Stanford University		23	Cardiomyopathies	Hypertrophic Cardiomyopathy-Causing Mutations R403Q and R663H Primarily Cause an Increase in N_a , Thus Increasing Ensemble Force and Contributing to their Hyper-Contractile Phenotype	106

Monday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Papadaki	Maria	Loyola University Chicago	X	49	Myofilament Contribution to Human Diseases	Diabetes with heart failure increases methylglyoxal modifications in the sarcomere which inhibit function	132
Pineda	JR Exequiel	University of Arizona		24	Cardiomyopathies	CELF4 Mediated TnnT2 Splicing in the Development of Post-Anthracycline Associated Early-DCM	107
Previs	Michael	University of Vermont-Burlington		50	Myofilament Contribution to Human Diseases	MYBPC3 Haploinsufficiency Enhances Contractile Mechanics in Hypertrophic Cardiomyopathy	133
Radke	Michael	Max Delbrueck Centrum		25	Cardiomyopathies	Depletion of full length vs. M-band titin leads to DCM vs. cardiac atrophy	108
Ramirez-Correa	Genaro	Johns Hopkins University School of Medicine	X	26	Cardiomyopathies	Tyrosine Phosphorylation of the Sarcomere is Dysregulated in Three Models of Hypertrophic Cardiomyopathy	109
Rexiati	Maimaiti	University of Wyoming		40	Regulation & Regulatory Signaling Networks	RBM20 Modulates Myofiber Maturation and Skeletal Muscle Regeneration	123
Ross	Jacob	King's College London		51	Myofilament Contribution to Human Diseases	Nuclear and Cytoskeletal Defects in Skeletal Muscle of Mice and Patients with Nemaline Myopathy	134
Schick	Brianna	Wayne State University	X	4	Determinants of Relaxation	Crossbridge kinetics, not passive stiffness, explain why myocardial relaxation rate becomes more sensitive to strain rate when preload is reduced in intact cardiac trabeculae	87
Schwan	Jonas	Yale University		27	Cardiomyopathies	Investigating Pathogenic Mechanisms of a Truncating MYBPC3 Mutation	110
Sewanani	Lorenzo	Yale University	X	28	Cardiomyopathies	Extracellular Matrix from Hypertrophic Myocardium Provokes Impaired Twitch Relaxation in Healthy Human iPSC-Derived Cardiomyocytes	111
Stachowski	Marisa	Loyola University Chicago		29	Cardiomyopathies	Ischemic Cardiomyopathy Perturbs GSK-3 β Localization to the Myofilament to Reduce Function	112
Sun	Mingming	University of Wyoming		36	Elastic Proteins of Muscle	Identification of RBM20 Phosphorylation and Its Role in The Regulation of Posttranscriptional Process of Myofilament Gene Titin	119

Monday Poster Session

Last Name	First Name	Institution	ECI Speaker	Poster No.	Abstract Category	Title	Page No.
Trivedi	Darshan	Stanford University	X	30	Cardiomyopathies	Mavacamten Stabilizes the Super-Relaxed State of β -Cardiac Myosin: Deciphering the Mode of Action from Myosin Molecules to Muscle Fibers.	113
van der Pijl	Robbert	University of Arizona		41	Regulation & Regulatory Signaling Networks	MARP1 is a negative regulator of passive stretch-induced hypertrophy	124
Vera Velazquez	Carlos	University of Colorado-Boulder		17	Cardiomyopathies	Dilated cardiomyopathy-causing mutations in human beta cardiac myosin have impaired force generation	100
Woody	Michael	University of Pennsylvania- Perelman School of Medicine		52	Myofilament Contribution to Human Diseases	Positive Cardiac Inotrope, Omecamtiv Mecarbil, Activates Muscle Despite Suppressing the Myosin Working Stroke	135
Woulfe	Kathleen	University of Colorado-Denver	X	53	Myofilament Contribution to Human Diseases	Altered Relaxation Mechanics in Pediatric Dilated Cardiomyopathy is Associated with Differences in Myofibril Acetylation	136
Yadav	Sunil	University of Miami	X	31	Cardiomyopathies	Pseudophosphorylation-mediated Rescue of Cardiac Function in MYL2 Mutations-Linked Familial Hypertrophic Cardiomyopathy	114
Zhu	Chaoqun	University of Wyoming		32	Cardiomyopathies	Rbm20 Deficiency Prevents Hypertension and Heart Failure Progression by Regulating Titin Size in Smooth Muscle	115
